

## Java update to version 7, update 51 (7u51) and higher

Java released an update, 7u51. If you or your staff have upgraded to Java 7u51 - on a CPS or personal computer - please note that you'll need to take these steps to ensure connectivity to Remote Access (VPN). If you need additional assistance, please call the IT Service Desk at (773) 553-3925.

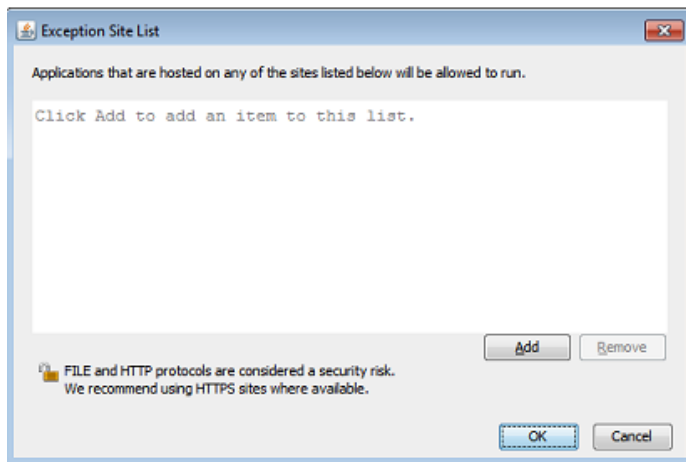

Java 7u51 and higher causes the Checkpoint deployment agent applet to fail. These steps circumvent the issue while Checkpoint research and development continues to work on a solution.

### Adding a site to the exception Site List

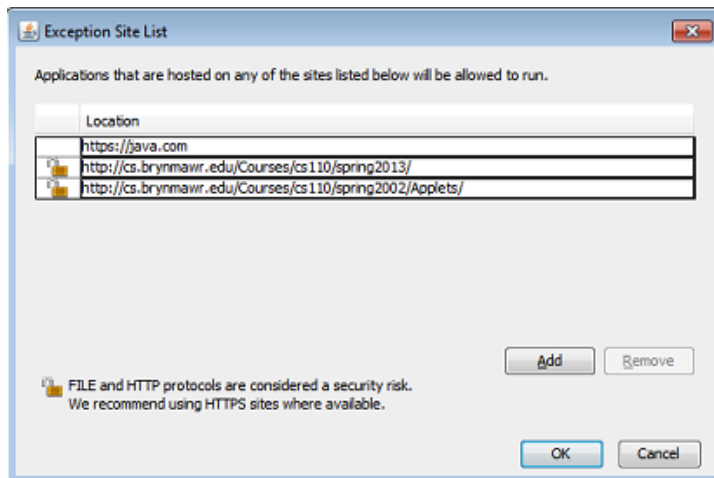

#### On Windows OS/Mac –

End-users can access the Exception site list form the Java control panel

1. Open the Java control panel.
  - a. Windows/Mac – Open your system control panel or System Preferences and choose Java.
2. Choose the Security tab.
3. Click the “Manage Site List” button near the bottom.
4. A new window will open.

5. Click the Add button.

6. Type <https://portal.connect.cps.edu>
7. Click OK. The window will close.
8. Back on the control panel. Click OK to close it.
9. Reload the web page on your browser to launch the Remote Access (VPN) site.
